Dear Hiring Professional,

I am seeking an software engineer internship position for this summer 2014. I am currently a graduate student at Johns Hopkins University majoring security informatics and my expected graduation is December of this year.

My most knowledgeable area is building softwares and solving problems with algorithms, which is due to my harding working of this area in the past years. I started studying algorithms and hacking algorithm problems since I was a high school kid, which was 6 years ago. Since then, I intermittently solved more than 1500 pieces of programs among a vast area of topics in algorithm, most of which are written with C/C++.

Algorithm studying, practicing and competing requires not only a quick and clear mind in problem solving, but also a distinguished willpower in continually trying things hard and new. However, I went beyond that as I took algorithm hacking for fun and would enjoy every algorithm contests I have participated ever. Very luckily, I've accomplished some remarkable performances among these contests, such as **National First Prize** in *"Lanqiao Cup"*, **Bronze Medal** in *ACM-ICPC*, or **42th place** among more than 4000 global contestants in a 24-hour hackthon just a few weeks ago.

In addition to my persistent commitment in algorithm, I have also led or participated in software developing in different ares like cryptography, security, web, networking, android development and reverse engineering. One special project I would like to mention is the *"Universal Online Examination System"*, since it was sponsored by me. In that project, I lead my teammates, who were all sophomore students without any web developing experience before, in building a web-based examination system. We worked hard day and night, and finally came out with a robust system which is still well serving more than 20,000 university students now. I have a very good experience in implementing softwares, maybe my enclosed resume could tell you more about my skills and experiences.

While *Microsoft* means a lot to me, I'm confident I will be a valuable asset to *Microsoft* too, which can bring a combination of extraordinary skills and passionate dedication in daily work. My phone number is *443-996-2046* and email is *jiefeng.hopkins@gmail.com*. I look forward to hearing from you and having the opportunity to further discuss my qualifications. Thank you for your time and consideration.

Sincerely yours,

Jie Feng
